# Message from the Provost

**Prof. Leonidas A. Phylactou**  
*Acting Provost of the Cyprus School of Molecular Medicine*

Dear Prospective Student,

I would like to introduce you to the Cyprus School of Molecular Medicine (hereafter also known as "CSMM") which is the postgraduate school of The Cyprus Institute of Neurology and Genetics. We are already well into the 3rd academic year, and full of pride for our first 37 Masters graduates, we continue with the same zeal and passion like the first day.

The Cyprus Institute of Neurology and Genetics (also known as "CING"), is a Center of Excellence in basic and applied research in biomedical and clinical sciences which combines services, research and education so as to produce novel knowledge in biology and diseases and upgrade the quality of life of people. Reaching to the 25th year of its operation, CING has proven its mission, established its presence and reputation not just in our small country, but in the region and Europe as well. The results of our work speak for themselves, recognized by the community, the government and the decision makers of our country. We are very proud that this is also acknowledged by senior officials in Europe i.e. the European Commissioner for Research, Maire Geoghegan-Quinn and the European Commissioner for Health, Tonio Borg, who we had the honor to welcome lately.

CSMM functions as a catalyst towards the aims of our Institute, giving our students a unique education in the areas of neurology, genetics and biomedical sciences. Like CING, CSMM is a School based on international standards of excellence. CSMM was established with the purpose of providing high standard education in biomedical sciences, by offering its students a unique environment for Masters and Doctoral studies. This is achieved by the

CSMM's highly qualified Professors and Lecturers who are ready to impart relevant expert knowledge to students.

Our academic programs are demanding and accept the top students in Cyprus and internationally. Our programs are designed to train students who are committed to their education, to become scholars and to acquire the knowledge their research and future careers demand. Through our academic programs, our students learn how to weave together theory and practice, since the programs combine taught courses and research in our highly specialized laboratories to experience real work from first-hand. Inevitably, our students contribute and play a vital role in our research programs. Our students represent our next generation of scientists.

We, at the CSMM, are committed to ensuring quality and rigorous academic programs that will challenge our students.

CING's years of experience combined with its areas of specialisation, have allowed us to expand our program range. Added to our existing accredited programs, three new programs are developed and will be introduced as of this year.

I invite you to explore our academic programs described in the Prospectus. You may also visit our website for more information. You can always get in touch with our Faculty and the Education Office for assistance.

# Message from the Dean

**Prof. Kyriacos Kyriacou**

*Dean of the Cyprus School of Molecular Medicine*

Dear Prospective Students,

It is with great pride that I welcome you to the Cyprus School of Molecular Medicine, the brain child of the Cyprus Institute of Neurology and Genetics. The CSMM was established in 2012 and with two successful years behind us we are entering the third year of operations, fully committed and determined to deliver a high calibre education to our students.

The Cyprus Institute of Neurology and Genetics was established in 1991 as a bi-communal, non-profit organization with the mission to function as a Regional Centre of Excellence in the areas of Neurology, Genetics and other Biomedical Sciences. In order to fulfil its mission CING established 14 different departments, of which 5 are clinics, covering Neurology and Neurosciences. The remaining 9 are laboratory departments that offer diagnostic services for a wide range of diseases, including thalassaemia, neurological disorders and cancer.

A unique characteristic of all CING departments is that their activities are based on the following three pillars: the delivery of specialized diagnostic services, the execution of competitive research and the organization of educational programs. The CSMM provides the educational platform through which the substantial experience gained by the CING personnel in both the diagnostic and research fields, is transmitted to the students. The CSMM programs offer a unique teaching and learning environment that stimulates and benefits the students. Thus the CSMM provides the springboard, for training the next generation of scientists in an environment that fosters excellence and ensures a high calibre of education. Already 37 highly trained students have graduated, 20 with an MSc in Medical Genetics and 17 with an MSc in Molecular Medicine.

Please take time to go through our prospectus and you will soon appreciate that our innovative MSc and PhD programs, cover a wide spectrum of interesting disciplines, which are organized around taught courses and research in our highly advanced laboratories. The CSMM programs are specialized, but within each program there is multidisciplinary and complementarity, in an effort to expose you to the latest advances but at the same time informing you about the challenges that lie ahead. Our academic staff is experienced and passionate about their work so we promise you a high calibre education that will reflect on your life and shape your future career. A unique feature of our programs is that students are exposed to the everyday uses of new knowledge and thus get first-hand experience on real life diagnostic and research applications. An exciting new addition to our existing programs of Medical Genetics and Molecular Medicine is the Neurosciences Program. This will immensely benefit students who select it, as they will be exposed to the vast experiences gained by the CING faculty, who are working for more than 20 years in this challenging field. For further information about our programs do not hesitate to contact our very able academic staff.

I invite you to join the CING community and experience first-hand the stimulating and challenging environment in which we operate. It is an environment based on academic excellence which ensures that all our efforts are invested in offering quality services which in turn improve the quality of life of Cypriot citizens.

My sincere wishes for a fruitful continuation of your studies and career!

# About the CING

## Cyprus Institute of Neurology and Genetics

The Vision of CING is to function as an International Center of Excellence and a Regional Referral Center in the areas of Neurology, Genetics, Biomedical, Medical and other related Sciences. CING's Mission is to develop and provide high level clinical and other laboratory SERVICES, develop and pursue advanced RESEARCH and provide post-graduate EDUCATION in those areas. Through CING's three main pillars; services, research and education; it aims to improve and upgrade the quality of life of patients, and strengthen its international role in the areas of its specialties.

Today the CING is one of the very few innovative organizations in Cyprus that has developed a critical mass, and contributes actively to the research and development of new knowledge. CING has available appreciable human potential, laboratory infrastructure unique for Cyprus, excellent relations and collaborations with countries of the Middle East, Northern Africa, Europe and America, and is successfully competing at a national and international level.

The Cyprus Institute of Neurology and Genetics provides a wide range of highly specialized clinical and laboratory medical and biomedical services to Doctors, Clinics and Hospitals in the Public and Private sector, offering diagnostics for common and rare diseases to the Cypriot citizens and to countries of the region. Although being independent in its support, it is public in its commitment and service and it is owned by the CING Board of Directors.

The CING is world-class in its standards, as several services offered by the Institute are accredited or certified thereby ensuring their high quality. All CING laboratories currently participate in international external quality control schemes.

The Institute's personnel is comprised of leading scientists and clinicians, who are devoted to the well-being of the local, regional and international communities. It is partnered with outstanding international institutions and welcomes students, faculty and staff of all nations, cultures, races and faiths; being dedicated to the advancement of knowledge and to its humane and benevolent application.

The CING is considered to be the most advanced tertiary medical academic center in Cyprus in the health sector as it provides education and training to doctors, scientists, students and paramedical personnel.

HR EXCELLENCE IN RESEARCH

# About the CSMM

## Cyprus School of Molecular Medicine

The Cyprus Institute of Neurology and Genetics (CING) has created its own postgraduate school, named the Cyprus School of Molecular Medicine (CSMM) open to students with research interests applicable to the Institute's activities. This postgraduate school is organized as a distinct entity within CING. CSMM programs are headed by the Provost of the School who is also the Chief Executive Medical Director and the Chairman of the Scientific Council of the Cyprus Institute of Neurology and Genetics.

CSMM aims to attract outstanding students with intellectual curiosity, who want to expand their education and the state-of-knowledge on regional problems of global significance on the topics covered by the Departments and Clinics of CING and who also:

- possess excellent analytical skills and are able to understand problems and propose solutions
- are capable of working diligently and productively on difficult projects
- have the ability to set their own goals and manage their own schedule successfully
- are motivated, self-critical and are able to evaluate their own performance fairly
- have good communication skills and are able to effectively communicate their ideas both verbally and in writing.

## Objectives of the School

To **establish** an educational center of excellence for postgraduate programs of international standing and reputation

To **attract and educate** students who can engage in competitive work and to enable them to be immediately enrolled into the Cyprus market and academia, so that they can contribute to the socio-economic landscape of Cyprus and worldwide

To **produce** high quality research output from students' projects (PhD programs) that will contribute towards the improvement of the quality of human life in Cyprus and worldwide

To **challenge** students with a wide variety of concepts and approaches and enforce international standards of excellence in the fields of Medicine and Biomedical Sciences

To **offer** exceptional curricula for its students which will provide the theoretical and applied knowledge necessary to achieve international caliber doctoral research

To **cooperate** with high level international research and educational centers and to promote cooperation and understanding through education, research and innovation

To **attract** excellent local and foreign students through the international visibility of the School's faculty, staff, and students

To **develop** effective communication skills for all its students and to help the students exercise these skills in a competitive environment

To **promote** the School as a center of excellence for students and scholars from abroad.

# Programs Available & Titles Awarded

The Ministry of Education and Culture approved the establishment of the postgraduate Cyprus School of Molecular Medicine of the Cyprus Institute of Neurology and Genetics.

The accreditation of the following four postgraduate programs of the CSMM, listed below, has successfully been passed via the Council of Educational Evaluation Accreditation (CEEAA) and the Ministry of Education and Culture of the Republic of Cyprus, with effect as of the date of establishment of the School: MSc Molecular Medicine, MSc Medical Genetics, PhD Molecular Medicine, PhD Medical Genetics.

Continuing our dynamic efforts, three new programs have been added: MSc Neuroscience, MSc Biomedical Research, PhD Neuroscience.

The programs of the School begin in September of each year.

## Infrastructure

The Cyprus Institute of Neurology and Genetics has state-of-the-art equipment in all its Departments and Clinics which is used for specialised diagnostic services and research activities. Some of the equipment has been purchased as a result of awards from competitive research funding and is unique in Cyprus. Students may carry out their research projects in the facilities of the various Departments and Clinics.

The list of equipment is extremely long and for practical purposes, a summary is presented below.

PCR machines, real-time PCR machines, heating and cooling incubators, regular and deep freezers, light microscopes, fluorescence microscopes, time-lapse microscope, confocal microscope, electron microscope, flow cytometer, cell incubators, cell culture biological cabinets, chemical cabinets, DNA microarray facility, automated DNA sequencing facility, mouse facility, laser capture microdissector, automated DNA extractor, benchtop centrifuges, ultracentrifuge, automated nucleic acids imaging facility.

Recently the above list has been enriched with high throughput analytical equipment which included Next Generation Sequencing (NGS) equipment for DNA analysis as well as MS/MS Mass Spectrometer platforms for analysis and identification of proteins.

# MSc Programs

MSc Molecular Medicine | MSc Medical Genetics |

\*MSc Neuroscience | \*MSc Biomedical Research

## General Information

The MSc program is organized around taught courses, (including tutorial sessions for each course on a weekly basis) and a research or a library project. Successful students will have to pass all course examinations and the MSc Thesis Examination to be awarded an MSc degree.

CSMM offers a 12-month MSc program to Full-Time students and a 24-month MSc program to Part-Time students.

### *MSc Molecular Medicine*

### *MSc Medical Genetics*

### \**MSc Neuroscience*

A minimum number of 50 ECTS from the taught courses of the program and a minimum number of 40 ECTS from the research or library project must be completed while enrolled on the MSc program. Students will undertake and be taught compulsory and elective courses.

Please note that for the MSc Molecular Medicine and the MSc Medical Genetics programs there are four mandatory courses and one elective course, whereas for the MSc Neuroscience program there are three mandatory courses and two elective courses.

### \**MSc Biomedical Research*

A minimum number of 20 ECTS from the taught courses of the program and a minimum number of 70 ECTS from the research project must be completed while enrolled on the MSc program. Students will be taught elective courses.

These criteria apply to the current programs of study but may be subject to change for future programs.

*Language of instruction: English*

## General Schedule

### **Full-Time (12 months)**

Taught Courses & Research or Library Project

### **Part-Time (up to 24 months)**

Minimum of one course per semester, among those offered in the referred semester

### **AUTUMN SEMESTER (30 ECTS)**

#### *MSc Molecular Medicine*

#### *MSc Medical Genetics*

#### \**MSc Neuroscience*

2 Mandatory Courses and 1 Elective Course

#### \**MSc Biomedical Research*

2 Research Modules and 1 Elective Course

### **SPRING SEMESTER (30 ECTS)**

#### *MSc Molecular Medicine*

#### *MSc Medical Genetics*

2 Mandatory Courses and 1 Research or Library Module

#### \**MSc Neuroscience*

1 Mandatory Course, 1 Elective Course and 1 Research or Library Module

#### \**MSc Biomedical Research*

2 Research Modules and 1 Elective Course

### **JUNE – SEPTEMBER (30 ECTS)**

#### *MSc Molecular Medicine*

#### *MSc Medical Genetics*

#### \**MSc Neuroscience*

Research or Library Module, project preparation and thesis examination

#### \**MSc Biomedical Research*

Research Module, report preparation and examination

*\* New program in the process of being accredited*

# PhD Programs

PhD Molecular Medicine | PhD Medical Genetics | \*PhD Neuroscience

## General Information

The PhD program is organized around taught courses during year 1, (including tutorial sessions for each course on a weekly basis) and a research project (thesis work) during years 2–4.

Successful students will have to pass all course examinations, the PhD Thesis Examination and have at least one first author publication in a peer-reviewed journal to be awarded a PhD degree.

A minimum of 50 ECTS from the taught courses of the program and 190 ECTS from the research part of the program must be completed while enrolled on the doctoral program. Students will undertake and be taught compulsory and elective courses.

These criteria apply to the current programs of study but may be subject to change for future programs.

*Language of instruction: English*

## General Schedule

### Year 1

#### **AUTUMN SEMESTER (30 ECTS)**

*PhD Molecular Medicine*

*PhD Medical Genetics*

*\*PhD Neuroscience*

2 Mandatory Courses and either 1 Elective Course or 1 Research Module

#### **SPRING SEMESTER (30 ECTS)**

*PhD Molecular Medicine*

*PhD Medical Genetics*

2 Mandatory Courses and either 1 Elective Course or 1 Research Module

*\*PhD Neuroscience*

1 Mandatory Course and 2 Elective Courses or  
1 Mandatory Course, 1 Elective Course and  
1 Research Module

### Research: Years 2–4

**Year 2 Total:** 60 ECTS = PhD Research Part II 50 ECTS  
PhD Thesis Progress Report and Examination 10 ECTS

**Year 3 Total:** 60 ECTS = PhD Research Part III

**Year 4 Total:** 60 ECTS = PhD Research Part IV 30 ECTS  
PhD Thesis and Examination 30 ECTS

- It is compulsory to register for at least 30 ECTS per semester*

- \* New program in the process of being accredited*

### Applies to all PhD programs

The above courses (apart from the Research Project of the spring semester) are composed of:

- Two lectures per week (duration 90 minutes each) and one tutorial per week (duration 60 minutes each)
- The total number of lectures per academic semester is 26 for each course
- The total number of tutorials per academic semester is 13 for each course
- Each course is credited with 10 ECTS with the exception of DRP102 (50 ECTS), DRP104 (60 ECTS), DRP105 and DRP106 (30 ECTS each)
- Students may have to retake DRP105 for a maximum of 4 times (years 5 & 6) if they are not ready to take the PhD Thesis Report and Examination at the end of year 4
- For all PhD programs: Research Modules parts 2 – 4 are carried out during years 2 – 4 of study.

# Course Descriptions

## MM101: Molecular Basis of Monogenic Diseases

COORDINATOR: Marina Kleanthous, Associate Professor

The course Molecular Basis of Monogenic Diseases is aimed at postgraduate students of biology and medical genetics and reviews all key aspects of the field of monogenic (or single-gene) disorders. Individually, monogenic diseases are rare but taken together affect about 1% of the population.

Moreover, owing to their accessibility to genetic and functional assays, monogenic disorders have contributed disproportionately to the development of modern tools and methods in genetics and to our knowledge of human gene function in health and disease. The scope of this course is to analyse the molecular mechanisms underlying exemplary monogenic diseases.

The course will further provide an overview of tools to study and understand monogenic diseases, with an emphasis on new technologies for gene discovery, on bioinformatics tools and on the prediction of disease severity based on primary genotype and on the presence of genetic and epigenetic modifiers. Attention will also be given to the more applied aspects of monogenic diseases, such as disease management and prevention, current and novel therapeutic approaches and the concepts of pharmacogenetics and personalised medicine.

## MM102: Molecular Basis of Complex Diseases

COORDINATOR: Kyriacos Kyriacou, Professor

Complex diseases are common polygenic disorders that develop as a result of interactions of multiple genes with each other, as well as with the environment. This lecture course will discuss the current aspects in the field of complex disorders. Despite the complex pathogenic mechanisms that operate towards the development of complex diseases, our understanding of their molecular basis has been greatly improved in recent years.

Therefore this course will describe the modes of inheritance, as well as the molecular mechanisms implicated in complex disorders. By drawing on specific examples of complex human diseases, such as cancer, diabetes, skin and respiratory disorders, current concepts of molecular mechanisms involved in their pathogenesis will be reviewed and discussed. A number of study designs will be employed to review the tools, past and present, used to investigate and understand complex diseases. The use of new technologies for elucidating disease mechanisms, including high throughput genotyping, functional genomics, model organisms and bioinformatics, will be discussed. In addition, the clinical aspects of complex diseases, such as prevention, early diagnosis, therapy, use of biomarkers, as well as evaluation of disease severity, based on modifying factors, genetic and epigenetic, will be reviewed.

## MM103/NEURO103: Neurosciences & Neurogenetics

*COORDINATOR: Theodoros Kyriakides, Professor*

The purpose of the course is to provide a foundation and a stimulus for the understanding of the structure and function of the central and peripheral nervous system so that the molecular basis of neurological disease is better understood. Basic knowledge on molecular biology methodologies and the scientific basis of Neurogenetics will be covered. Great emphasis will be given to correlating basic scientific principles to disease causation and symptoms in the nervous system.

The course will cover the anatomy and functional organization of the central and peripheral nervous system at macroscopic, microscopic and sub-cellular level. Common disease mechanisms participating in neurodegeneration such as oxidative stress, apoptosis, protein aggregation, mitochondrial dysfunction will be outlined and subsequently illustrated in a variety of human neurological disorders. Similarly the contribution of some cellular organelles in the pathophysiology of neurological disease will be illustrated. Throughout the course great emphasis will be made to correlate clinical phenotype with the molecular basis of disease which will also include genetic and epigenetic aspects. Lastly a variety of animal models will be examined to illustrate some of the principles of translational medicine.

## MM104: Gene and Cell Therapy

*COORDINATOR: Leonidas A. Phylactou, Professor*

The course of Gene and Cell Therapy includes the main topics of the fields of Gene and Cell Therapy. The majority of diseases, inherited or acquired could be candidates for gene and cell therapy. Until now, several approaches have been developed towards this direction. Some of these have been tested in patients but the majority of them are at the research level, since gene and cell therapy are recent disciplines of the biomedical field.

The initial aim of the course is the understanding of the various ways of delivering genetic material in cells and organisms. The genetic "tools" which are currently used for gene and cell therapy will then be described and analysed. A big portion of the course will also deal with the various strategies developed for gene and cell therapy of diseases such as muscular dystrophies, cancer, inherited and infectious diseases.

Finally, gene and cell therapy clinical trials will be described and discussed in the classroom. The course is designed to understand firstly the concepts and tools for gene and cell therapy and then their application in the various strategies against diseases. The students will then comprehend and put together all knowledge received through presentations of research papers and acquaintance and discussions of gene and cell therapy clinical trials. Tutorials will be used to answer specific questions and to deepen students' understanding through group discussions with the aid of research papers.

## MG101: Molecular Genetics

COORDINATOR: *Marios Cariolou, Professor*

The course in Molecular Genetics will focus exclusively on human genetics. Selected areas of emphasis will cover, at the beginning of the course, a broad range of basic concepts including: human DNA structure, gene function and organization and control of gene expression. More complex areas will concentrate on the human genome project, GWAS (Genome Wide Association Studies), understanding the role of genetic polymorphisms in athletic performance and mutations in disease development using as examples cardiovascular conditions, inherited deafness and disorders of sexual differentiation (DSD).

The course will include lectures on the use of genetics in human identification for forensic purposes including crime related investigations, kinship analyses, missing persons and disaster victim identification. Data analysis, interpretation and basic statistical methods used in forensic genetics will also be covered. The course will be completed by the presentation of interesting bioethical issues resulting from the advancement of genetics in health and/or forensic related areas and how genetic studies undergo bioethical review in Cyprus.

## MG102: Cytogenetics & Genomics

COORDINATOR: *Carolina Sismani, Assistant Professor*

The aim of this course is to provide in-depth education to students in the area of Human Cytogenetics and Genomics. The course will cover all aspects of human cytogenetics and genomics and will include methodologies from conventional cytogenetics such as tissue culture, karyotype and FISH to more cutting edge technologies used in molecular cytogenetics and genomics such as array-CGH (Comparative Genomic Hybridization) and NGS (Next Generation Sequencing).

The course will also cover the mechanism of formation of chromosomal abnormalities, their pathogenicity and clinical interpretation. Emphasis will also be given in the current research involving the field of cytogenetics and genomics.

The lectures of this course include topics such as, laboratory methodologies, analysis of chromosomes, preimplantation, prenatal and postnatal analysis, chromosomal disorders and syndromes, cancer cytogenetics, epigenetics, genomic disorders, molecular mechanism, non-invasive prenatal diagnosis, NGS and many other topics. The course will include lectures, tutorials, workshops, presentation of actual cases and referrals to current bibliography.

## MG103: Methodologies & Technologies Applied in Medical Genetics

*COORDINATOR: Kyproula Christodoulou, Professor*

The aim of the course is to enable students to understand in-depth, critically discuss, implement and competently interpret and present results of a wide range of methods and techniques that are applied in medical genetics.

The course will consist of lectures, tutorials, laboratory demonstrations and literature studies. Each lecture will be focused on one major method or a group of methods that are applied in medical genetics with relevant application examples.

Methodology and technology to be covered includes: nucleic acids extraction from various tissues, nucleic acids separation methods, amplification of nucleic acids by PCR, restriction enzymes and recombinant DNA technology, Southern blot analysis, DNA sequencing, DNA repeats analysis, SNP analysis, Real Time PCR, MLPA analysis, DHPLC analysis, DGGE analysis, SSCP analysis, Western and Northern blot analyses, microarray technology, proteomics, next generation sequencing, haplotype and linkage analyses, linkage disequilibrium and association analyses and genetic risk assessment.

## MG104: Biochemical Basis of Genetic Diseases

*COORDINATOR: Petros Petrou, Lecturer*

Gene mutations primarily affect proper protein function often resulting in cellular pathology and the manifestation of disease. This course is mainly focused on inherited metabolic disorders and aims at providing postgraduate students with a comprehensive background and understanding of the effects of protein dysfunction on cell and organ pathology. Inborn errors of metabolism comprise a large group of disorders which are predominantly caused by inherited deficiencies of enzymes involved in specific biochemical pathways.

The course will deal with the major metabolic pathways and discuss genetic, cellular, clinical and biochemical features of related disorders. Inherited enzymatic deficiencies and their effects on the function of organelles such as lysosomes, peroxisomes and mitochondria will be further highlighted.

Students will also be introduced to the principles, methodology and instrumentation used for the laboratory investigation of inborn errors of metabolism including the latest technological advances. Current approaches, challenges and new trends in the management and treatment of these disorders will be reviewed. The concept of newborn screening for inherited metabolic disorders along with the associated benefits, problems and dilemmas will be discussed.

## NEURO101: Cellular and Molecular Neuroscience

COORDINATOR: Kleopas Kleopa, Professor

The aim of this course is to provide an in-depth understanding of basic cellular and molecular processes underpinning brain function. The unique aspects of nervous system development, cellular architecture, excitability, and homeostasis will be highlighted. Examples of neurological disorders resulting from genetic or acquired nervous system disturbances at the cellular and molecular level will further emphasize their importance and provide a link between basic and clinical neuroscience.

In addition to the theoretical basis, the course will include practical aspects of research in the neuroscience laboratory such as imaging, microscopy, DNA recombination, and generation of disease models, all needed for further career in neuroscience research.

The CMN course will provide complementarities with the other core courses within the Neuroscience MSc/PhD program in order to offer a complete coverage of the field. Transferable skills will also be acquired through focused school-wide lectures.

## NEURO102: Brain and Behaviour

COORDINATOR: Savvas Papacostas, Professor

The main emphasis of this course will be two-fold. On the one hand it will review and discuss the basic structure of the nervous system and the way its nature and pattern of physiological functioning influence normal and abnormal behaviour; neuronal functioning and its effects on neurotransmitters, structural and anatomical features of the nervous system, hormonal and endocrine functioning and the interrelationships between various biological systems in the regulation of behaviour.

On the other hand it will review and discuss the physiological bases and current research in a number of selected behaviours and neurological/psychiatric conditions such as sleep, eating, reproduction, aggression, memory, communication and mental disorders.

### Topic areas

- Physiological, anatomical and communicative functions of neurons in the central nervous system
- Structures and anatomical features of the brain, especially those parts related to behaviour
- The neural and/or hormonal bases of selected behaviours
- Interrelationships between various parts of the brain in the regulation of behaviour
- Contemporary literature in physiological bases of behaviour
- Current research in physiological neuropsychology and comparisons with results of contemporary research with other published information.

## **MVI:** Molecular Virology and Immunology

*COORDINATOR: George Krashias, PhD*

The course Molecular Virology and Immunology offered at CSMM includes the main topics in the fields of Virology and Immunology. This course has a dual purpose: to provide an integrated and more advanced understanding of viruses in general and their role in disease pathogenesis, focusing on understanding the molecular basis of these processes; and secondly to provide broad knowledge of the basic concepts in cellular and molecular immunology. Emphasis will also be given to understanding the viral survival strategies and the immune mechanisms that result in elimination of viral pathogens.

An overview of available approaches (vaccines and antiviral drugs) for providing protection and treatment against viral diseases and of various cutting edge methodologies currently used for the diagnosis and monitoring of viral infections will be also be provided by this course. Tutorials held throughout the course will address specific questions, helping students to broaden the knowledge acquired during lectures through group discussions and the use of original research papers.

Finally, the workshops will be used to improve students' communication skills through oral presentations and small group discussions. The course does not require any previous knowledge in virology and immunology.

## **Preparatory Course** Introduction to Molecular Biomedical Sciences

*COORDINATOR: Carsten W. Lederer, Lecturer*

The preparatory course Introduction to Molecular Biomedical Sciences provides necessary background information for the main CSMM postgraduate programs.

Attendance and successful completion of a written course exam are/is compulsory for course participants from non-biomedical backgrounds. The course is also highly recommended as a vocabulary primer for participants originating from non-English-speaking institutions and as an update for participants who graduated a number of years ago. Moreover, attendance may benefit anyone registered for the CSMM postgraduate programs. This preparatory course precedes the main CSMM courses and is organised into a maximum of 10 lecture sessions.

# Admission Criteria, Application Procedure & Student Information

**To be admitted to an MSc or a PhD program, a student must meet at least the minimum requirements listed below:**

- A Bachelors degree from a recognized accredited institution, in a related field of study
- English Language Certification or other accepted International Standard, if graduated from a school where English is not the language of instruction.

## Application Process - MSc & PhD Programs

The available positions for new students are announced on the CSMM website and in the press during the last week of January, before the beginning of the academic year, with a deadline during April of the same year.

## Required Documents

- A Completed Online Application Form
- CV and Highschool Leaving Certificate
- Two Academic References
- Academic Transcripts
- English Language Certificate (if not graduated from an English speaking University)

## European Credit Transfer System (ECTS)

All Programs use the European Credit Transfer System (ECTS) which takes into consideration the workload for:

- a) class attendance b) homework c) exam preparation.

In order to be awarded their title, students must successfully complete all courses included in their Program's curriculum including any other MSc or PhD degree requirements such as their Library or Research/Lab project (thesis) or PhD examination and produce at least one academic publication.

ECTS course exemptions may be granted subject to review on a case by case basis and upon application. For information, contact the Education Office.

## Course Registration

The CSMM offers an online service portal (Extranet) that facilitates the education experience. It allows faculty and students to communicate and share educational material, view assessment results, statistics and academic transcripts. Also, registration and payment are only possible through Extranet. Students will be provided with a unique username and password at the beginning of the academic year which will allow them to navigate through the portal.

Students are expected to attend all necessary lectures.

## Adding and Dropping Courses

Students have the right to add or drop a course within a certain period at the beginning of each semester. More information regarding the exact dates to add or drop a course is available in the academic calendar.

## Student Representatives

At the beginning of each Academic year, all students from each Program will be requested to elect one representative. Class representatives will represent the CSMM students in various activities and serve as an intermediary between the students, the faculty and the administration.

# Information for International Students

## Entry Requirements

### Travel Documents

Traveling to Cyprus requires certain documents which vary, depending on nationality. A valid passport is required for a stay of up to 90 days for all tourists, except EU, Switzerland, Iceland, Liechtenstein and Norway citizens, who may enter Cyprus with the use of their national identity card provided that it bears a photo. Some non-EU third country nationals require a visa. Further detailed information can be obtained from the Ministry of Foreign Affairs.

### Legal Points of Entry

The legal ports of entry into the Republic of Cyprus are the airports of Larnaca and Pafos (Paphos) and the ports of Larnaca, Lemesos (Limassol), Latsi and Pafos (Paphos), which are situated in the area under the effective control of the Government of the Republic of Cyprus. Entry into the territory of the Republic of Cyprus via any other port or airport in which the Government of the Republic does not exercise effective control (Turkish occupied areas) is illegal.

### Health Insurance and Services

All E.U. students who have a European Medical Card E111 are entitled, upon presentation of the card, to free medical and pharmaceutical care by public hospitals in Cyprus.

Non-E.U. students, as well as E.U. students who do not possess the above mentioned card, must obtain private medical insurance for in-hospital and out-patient medical treatment in Cyprus.

Non-E.U. students will also need to obtain private medical insurance immediately upon arrival in Cyprus as it is a requirement to obtain a VISA.

## Diplomatic Missions of the Republic of Cyprus Abroad

Detailed information regarding the Embassies and High Commissions of the Republic of Cyprus abroad can be obtained from the Ministry of Foreign Affairs.

## About Cyprus

Cyprus is geographically located in the north-eastern corner of the Mediterranean Sea, at the crossroads of 3 continents, Europe, Asia and Africa, 75km south of Turkey, 90km west of Syria and 380km east of the Greek island of Rhodes. It covers an area of 9,251 sq. km which makes it the third largest island in the Mediterranean Sea after Sicily and Sardinia.

According to data published by the Statistical Service of the Cyprus Ministry of Finance, the total population of Cyprus was 862,000 at the end of 2011 of which 71.5% (616,330) is considered to be members of the Christian Greek Cypriot community and speakers of Greek. Of the remainder, 9.5% (81,890) belong to the Muslim Turkish Cypriot community and speak Turkish, and 19% (163,780) are foreign workers and expatriates residing in Cyprus.

As is the norm in former British colony countries, English is widely spoken in Cyprus and regularly used in commerce and government. While the majority of the Greek Cypriot community is members of the Autocephalous Greek Cypriot Orthodox Church of Cyprus, 1.2% are actually members of the Armenian, Maronite and Latin churches. Under the provisions of the 1960 Constitution these religious minorities chose to be considered members of the Greek Cypriot community.

The capital of Cyprus is Lefkosia (Nicosia). It is located roughly in the middle of the island and is the seat of the Government as well as being the main business center.

# Mobility Opportunities at the CSMM

## Erasmus+

As an educational institution which has been awarded the Erasmus Charter for Higher Education, the CSMM supports mobility of students and staff to improve the quality of higher education by encouraging transnational cooperation between universities and contributing to improved transparency and academic recognition of qualifications and studies throughout the European Union.

Students of the CSMM are currently participating in mobility programs with partner institutes in the UK and Denmark.

Under regulations of the Erasmus Scheme, Alumni of the CSMM are entitled to participate in mobility schemes for up to a year after graduating from the School. This provides a plethora of opportunities for our alumni to gain both work experience and skills in an international setting.

The CSMM Education Office provides assistance and support to all participants of mobility programs. Full details can be found on the CSMM website: [www.cing.ac.cy/csmm/](http://www.cing.ac.cy/csmm/)

# Student Services

## WE ARE HERE TO SUPPORT YOU EVERY STEP OF THE WAY!

The CSMM Education Office deals with all matters involving student affairs as well as international relations. The Education Office is the first and main point of contact for all applicants to the CSMM, students of the School and participants of mobility programs.

The Education Office is the central point of contact and communication for international students and participants of mobility programs.

The Office is responsible for ensuring a seamless application procedure and smooth induction and study period for students, while also following-up post-study with international students and mobility participants in order to ensure full recognition of their time spent at the CSMM through the Learning Agreement and Transcript of Records.

The Education Office also organizes various types of student events and activities such as Orientation Programs, Awards Ceremonies, Charity Events, Graduation Ceremonies, etc.

Careers Office services such as CV Workshops and mock interviews are also organised by the Education Office in cooperation with the Institute's Human Resources Department. The aim of the Careers Office is to assist students and alumni in preparation for all career related issues.

The personnel at CSMM are committed to enriching the student experience and promoting a full and active student life. We provide the necessary support and resources to ensure that all students will enjoy their experience at the CSMM to the maximum.

## The Education Office is committed to:

- Providing advice, support and guidance to international and home applicants and students of the CSMM regarding the application procedure, mobility programs, visa and entry information, accommodation and living in Cyprus
- Arranging contact with Academic Mentors
- Arranging assistance with counseling support and special needs
- Arranging induction activities such as Orientation Events and appointing a host institute "Buddy" for incoming mobility participants.

[csmm@cing.ac.cy](mailto:csmm@cing.ac.cy)

# Student Services

## Orientation Event

Before the beginning of the Autumn Semester, the CSMM organises a warm welcome orientation event for all new students. This is a perfect opportunity for students to become familiar with the School's premises, to meet the Academic Staff and the Administrative Team, take tours, participate in fun activities, and make some new friends before the Autumn semester gets underway.

## Library

The Library of the Cyprus School of Molecular Medicine consists of reference books, journals, technical information, dictionaries and other reading material. The academic staff and students of the CSMM have access to information such as electronic journals and databases. The Library is continuously updated with new scientific journals and books, relevant to the CSMM's clinical, educational and research activities.

Student computer laboratories and meeting areas are available in the Library area. Students are able to access the internet and work on their assignments. Printing facilities are also available.

There are no laboratory-based courses; however students may have to undertake individual research projects. Students are placed in the Departments or Clinics of CING and will be under the supervision of an advisor.

## Academic advice and guidance

All students will be assigned an Academic Advisor who will be responsible to advise students on academic issues.

In addition, students will also be assigned a Research/Library Advisor who will advise and supervise them regarding their final thesis (research project or library project).

Additionally, students may also consult the Education Office on other topics related to living in Cyprus.

Finally, students will be bound by the existing

rules, regulations and policies common to all CING employees and also by the CSMM Student Policies, information within the Student Handbook.

## Services for Students with Special Needs

The CSMM is committed to treating all students with special needs as equals to all other students; therefore, every effort is made to offer practical solutions to any of their specific needs, such as access to the CSMM facilities, or assistance on their academic issues.

## Employment

The CING is a highly respected organisation both locally and internationally. As a result, various important projects are conducted within the Institute. CSMM PhD students will have the opportunity to be part of various important projects towards a reduction in their tuition fees.

## Café/Restaurant

A café/restaurant is available on the CING premises with subsidised prices for all CING employees and CSMM students.

## Accommodation

Students of the Cyprus School of Molecular Medicine can choose from a great range of private apartments and houses within walking distance of the School. The Education Office may assist students in finding their accommodation for the duration of their studies.

Indicatively, the monthly rent for a two-bedroom apartment varies from €425–€500, whereas the monthly rent for a three-bedroom apartment ranges between €450–€650.

## Local Area

Within walking distance from the School, students can find a mall, various shops, coffee shops, restaurants, clubs, banks etc. Monthly living expenses are estimated to be between €680–€850 including rent.

# Social Responsibility and Sustainability

The CING and the CSMM are committed to social responsibility and sustainability. To this extent, CSMM students and CING academic and administrative staff are highly encouraged to:

- Volunteer in various charity events (especially fundraising for TELETHON), blood donations, green events
- Provide open lectures/seminars based on their expertise, given the non-profit character of the organisation
- Recycle non-toxic used lab consumables and other recyclable materials in the CING designated areas
- Make energy savings in the buildings
- Submit innovative ideas to the CING management regarding additional related actions that can be implemented.

# School Governance & Faculty

## School Council

Prof. Leonidas A. Phylactou - CING Chief Executive Medical Director and BoD Member (President)  
 Alexandros Ioannides - CING BoD Member (Member)  
 Stelios Stylianou - CING BoD Member (Member)  
 Prof. Kyriacos Kyriacou - Dean of the CSMM (Member)  
 Prof. Kyproula Christodoulou - CSMM Faculty (Member)  
 Prof. Theodoros Kyriakides - CSMM Faculty (Member)  
 Prof. Marios Cariolou - CSMM Faculty (Member)  
 Dr. Marina Kleanthous - CSMM Faculty (Member)  
 Ms. Marina Stavrou - Elected Student Representative (Member)

## Provost

The Chief Executive Medical Director of the Cyprus Institute of Neurology and Genetics, Prof. Leonidas A. Phylactou, is the ex-officio Provost of the School. He has the overall supervision of the operation of CSMM. The Provost of the School oversees all external relations and is responsible for promoting the expansion of CSMM.

## Dean

The Dean of the School has the academic responsibility of the CSMM. Prof. Kyriacos Kyriacou is the appointed Dean of the Cyprus School of Molecular Medicine.

## Program Coordinators

The Program Coordinators are responsible for the management and coordination of the specific programs of the CSMM.

**Molecular Medicine:** Prof. Theodoros Kyriakides

**Medical Genetics:** Prof. Kyproula Christodoulou

**Neuroscience:** Prof. Kleopas Kleopa

**Biomedical Research:** Prof. Marios Cariolou

## Academic Faculty

Cariolou Marios, Professor  
 Christodoulou Kyproula, Professor  
 Kleopa Kleopas, Professor  
 Kyriacou Kyriacos, Professor  
 Kyriakides Theodoros, Professor  
 Papacostas Savvas, Professor  
 Phylactou Leonidas, Professor  
 Drousiotou Anthi, Associate Professor  
 Kleanthous Marina, Associate Professor  
 Pantzaris Marios, Associate Professor  
 Anastasiades Violetta, Assistant Professor  
 Hadjisavvas Andreas, Assistant Professor  
 Papanicolaou-Zamba Eleni, Assistant Professor  
 Sismani Carolina, Assistant Professor  
 Bashiardes Evy, Lecturer  
 Lederer Carsten, Lecturer  
 Mastrogiannopoulos Nicolas, Lecturer  
 Petrou Petros, Lecturer

## Finance & Administration

### Director of Finance and Administration

The Financial and Administrative Director of CING, Mr. Marios Flouros, is the ex-officio Financial and Administrative Director of the School who has the responsibility for the financial and administrative work of the CSMM.

### Education Office Personnel

*MANAGER:* Marinos Voukis  
 (marinosv@cing.ac.cy, +357 22392842)

*OFFICER:* Maria Lagou

# Tuition Fees & Scholarships

## Tuition Fees

Education is an investment in your future and the CSMM is committed to offering an accessible education to all successful applicants.

Students will be informed by the Education Office about the exact payment deadlines each semester.

FEE TYPE	AMOUNT (€)	DETAILS
MSc Tuition Fees	8,000	
PhD Tuition Fees	Please see note 3 below	–
Application Fees	40	Per application
Registration Fees	25	Per registration
Late Registration Fees	25	Per late registration
Technology Fees (internet & email use)	10	Per registration
Transcript Fees	5	Per additional copy
Graduation Fees	50	–
Preparatory Course Fees	300	–

### Notes:

(1) Health Insurance cover is recommended for all students.

(2) International students are required to have health insurance for themselves as well as for their spouse and children.

(3) The total cost for the PhD Programs (Euros 20,750) is divided over the duration of 4 years. The cost for the 1st year of studies amounts to Euros 5,450.

## Scholarships & Grants

### Publicly-Funded Grants

Students of the CSMM are entitled to apply for a publicly-funded grant based on the Government's assessment criteria.

### CSMM Scholarships

A number of full and partial scholarships to cover tuition fees are awarded to MSc and PhD students based on academic criteria.

In addition to the above, various types of scholarships are available specifically for PhD students, for years 2, 3 and 4 which may cover costs of consumables and/or a monthly allowance.

The exact amount and number of scholarships that are offered is always subject to the yearly budget of the School.

# Academic Calendar

Full-Time studies: Lectures scheduled every day, from 8am to 7pm

## Calendar for the academic year 2015-2016

	Fall Semester	Spring Semester	Summer Period (only for MSc Progs.)
Registration for Preparatory Course	June - 10 Aug 2015	-	-
Preparatory Course	17 Aug - 7 Sept 2015	-	-
Registration Period	24 Aug - 13 Sept 2015	4 - 22 Jan 2016	16 May - 5 June 2016
Late Registration Period	14 - 18 Sept 2015	25 Jan - 29 Jan 2016	-
Beginning of courses / project	21 Sept 2015	1 Feb 2016	6 June 2016
Deadline to ADD / DROP course / project	2 Oct 2015	12 Feb 2016	17 June 2016
Last days of lectures	18 Dec 2015	13 May 2016	-
Examinations	7 - 21 Jan 2016	16 - 30 May 2016	5 - 14 Sept 16
Holidays	21 Dec 2015 - 6 Jan 2016	25 Apr - 8 May 2016	-

### Public Holidays 2015

01 October	Independence Day
28 October	Greek National Day
24 December	Christmas Eve
25 December	Christmas Day
26 December	Boxing Day
31 December	New Year's Eve

### Public Holidays 2016

01 January	New Year's Day
06 January	Epiphany Day
14 March	Green Monday
25 March	Greek Independence Day
01 April	National Day
28 April	Holy Thursday (Half Day)
29 April	Good Friday
02 May	Easter Monday
20 June	Whit Monday
15 August	Assumption Day

# How to Find Us

## Physical address

Cyprus School of Molecular Medicine  
The Cyprus Institute of Neurology and Genetics  
6 International Airport Avenue  
Ayios Dhometios, 2370 Nicosia, Cyprus

## Address for correspondence

Cyprus School of Molecular Medicine  
The Cyprus Institute of Neurology and Genetics  
P.O.Box 23462  
1683 Nicosia, Cyprus

## Useful numbers

Telephone CING: +357 22358600  
Telephone CSMM: +357 22392840  
Telefax CING: +357 22358238  
Telefax CSMM: +357 22392845

## Coming from abroad

The legal ports of entry to the Republic of Cyprus are the airports of Larnaca and Paphos and the ports of Larnaca, Limassol, Latsi and Paphos, directions below.

## Coming from Paphos, Limassol, Larnaca

Coming from the Limassol/Larnaca-Nicosia highway, keep to the left hand lane when approaching the main roundabout under the bridge and take the 1st exit. Proceed straight down Spyros Kyprianou Avenue, past Metro supermarket (on your left) and Jumbo Toy Store (on your right) until you reach the T-junction at the top of the hill at Makedonitissa, where you will have Ayios Panteleimon Church on your right (you will pass several roundabouts and traffic lights along the way). Turn right on to Iroon Avenue and go straight ahead (pass Makedonitissa Palace on your right and Tymvos Cemetery on your left). Just after the University of Nicosia (on your right), and following a sharp bend, the entrance to the Institute is on your left.

## Coming from Nicosia center

At the traffic lights where Likavitos Police Station is situated, with Debenhams "Central" on your right, go straight ahead on to Spiros Kyprianou Street (previously Santa Roza Street), which then becomes Griva Digenis Street (pass Costa Coffee, Starbucks, Ariston patisserie, Kykkos' Metochi, Alfa Mega supermarket, McDonalds and Hilton Park Hotel), until you reach the Kolokassides roundabout at the end of the road.

Take the 1st exit and then immediately on your right you will see the entrance of the Institute.

## Coming from Troodos mountains

Coming from Troodos Mountains, follow directions towards Nicosia and exit the highway towards Makedonitissa. From Iroon Avenue you go straight ahead (pass Makedonitissa Palace on your right and Tymvos Cemetery on your left). Just after the University of Nicosia (on your right), and following a sharp bend, the entrance to the Institute is on your left.

### **Legal Responsibility**

The person legally responsible for the Cyprus School of Molecular Medicine is the Cyprus Institute of Neurology and Genetics.

### **Prospectus Approval**

The prospectus has been approved by the Ministry of Education and Culture by their letter dated 14th January 2015.

**Disclaimer:** Information included within this prospectus was correct at the time of publication. The information is to be used as a general guide, changes may occur after publication.

CYPRUS SCHOOL
